**FOR IMMEDIATE
RELEASE**

BlueQuartz Software Professional Publishes in *JOM*

(Warrendale, PA)...Michael A. Jackson, principal software engineer with BlueQuartz Software, is co-author of “Strategies for Integration of 3-D Experimental Data with Modeling and Simulation”* which was published in the March 2011 edition of *JOM*, the journal of The Minerals, Metals & Materials Society (TMS).

In the authors’ words:

As materials characterization moves from two-dimensional images to three-dimensional volumes, the data representing these materials becomes quite large and requires vast amounts of computational power for processing and analysis. In this work, we describe some approaches one might use to make 3-D datasets, and the simulation of their behavior, more manageable.

Tracked by Science Citation Index, *JOM* is a journal devoted to exploring the many technical and professional aspects of materials science and engineering. *JOM*’s publisher TMS, is the professional organization encompassing the entire range of materials science and engineering, from minerals processing and primary metals production to basic research and the advanced applications of materials. Included among its professional and student members are metallurgical and materials engineers, scientists, researchers, educators and administrators from more than 70 countries on six continents.
